

LeisureSentry

Wireless Personal Security System

To automatically or manually summon assistance in an emergency situation. Helping you to meet your Health and Safety obligations.

Waterproof Push Buttons

Siren and Flashing Light Available

Manager Alert System

No Contracts

Easy Install

The leisureSentry system is designed to help protect staff and patrons as well as provide a means of raising an alarm within the centre. A system comprises of one or more transmitters either carried or worn by the lifeguards, or fixed wall buttons at poolside and gym locations which when activated, send an alarm signal back to a central receiver.

The central receiver is a wall-mounted unit, featuring a number of indicators, a sounder and a reset button. Upon receiving an alarm signal, the corresponding indicator illuminates, and the sounder starts. The alarm is cancelled when the reset button on the central receiver is pressed. The receiver also comes with an option of onsite paging to give an instant alert to all managers as well as activating any number of siren/strobe units.

All equipment conforms to the UK licensing requirements & CE regulations.

Technical Details

A. Waterproof Wall Transmitter

When the button is pressed, a signal is transmitted. This unit is ideal for pool-side locations where different people may be present, but who may need to summon assistance.

B. Lone worker Transmitter

It can be carried in a pocket, or worn in the carrying pouch (supplied). It features buttons, which allow a worker to call for help, and it also features a tilt switch, which automatically triggers an alarm should the worker collapse, or be injured. This is for the maintenance staff working around the site and in plant rooms.

C. Waterproof Wrist Transmitter

This is ideal for lifeguards on pool-side. Fully waterproof, a single press of the button will ensure assistance is quickly on its way.

D. Waterproof Pendant Transmitter

Again, portable and waterproof, this unit is ideal for pool-side and gym staff.

E. Pocket Pager

Worn by a member of staff to receive the transmitted alarm. The unit alerts the user via an audio and vibrate function. The message received is specific to the device that has been activated.

F. Central Receiver

The unit may be a four, eight or twenty eight channel device. This means it is capable of supporting numerous different transmitters (A-D in the above image). The receiver will display the identity of which alarm unit has been activated.

The central receiver can also support other equipment:

A siren/strobe can be connected to the system, which is ideal for raising the alarm in a noisy environment.
